NTELX International Subsidiary Launches Project at Iraq's Largest Seaport: Iraq's Ambassador Briefed on Initial Operations

Vienna, VA June 16, 2016 – NTELX International (NXI) met today with Iraq's Ambassador to the U.S., Lukman Faily, to brief him on the initial performance of the Company's intelligent transportation system at Umm Qasr, Iraq's main seaport. Built and operated by NXI's Mideast subsidiary under an agreement with Iraq's Transport Ministry, the service increases port efficiency and minimizes the time needed for trucks to load or unload cargo. Commercial service began on June 1st, and today the system managed the movement of 1,000 trucks.

Larry Kahn, NXI President; Iraq Amb. Lukman Faily; and Rob Quartel, NXI Chairman

The system automates operations within the port by combining process redesign with an integrated software platform for the port operators and truck dispatchers, truck marshalling yards, terminal capacity controls, automated and staffed checkpoints, data validation, and routing algorithms.

Improved performance at Iraqi ports is critical as land routes to neighboring countries cross ISIS-controlled territory.

NTELX International (NXI) promotes, develops, finances, builds, and operates projects outside of the United States that improve freight transportation starting at the gates of port terminals. NXI was formed when NTELX, Inc. separated into two companies. NTELX, Inc. is a provider of software solutions that mobilize analytics for use in operations for public and private-sector clients.
